Who?

Atex, a production line of Spina Group, is a manufacturer of explosion-proof electrical equipment and accessories, created to respond to safety requirements in the industrial sector. The business unit of San Giuliano Milanese, near Milan, is 100% Italian, strongly geared towards the international market and has been operating in the areas of Oil & Gas, Petrochemical, Energy, Industry and Infrastructure.

What?

Atex designs, manufactures and markets Ex d; Ex de; Ex e; Ex i products suitable for installation and use in industrial environments where potentially explosive atmospheres may occur.

How?

Atex is highly specialized in manufacturing explosion proof material on specifications provided by the customer. In the absence of specifications, Atex offers suitable solutions for your scope of application and the existing regulatory standards. Tests and inspections are made in collaboration with the customer.

Products

All products are manufactured in accordance with current European (EN) and International (IEC) standards and are certified in accordance with the requirements of the European Directive relating to equipment and protective systems intended for use in potentially explosive atmospheres (ATEX) and the IECEx international voluntary certification scheme.

Fields of application:

- Oil & Gas: offshore platforms, gas and oil pipelines
- Energy: energy transmission, power plants, energy conversion, renewable sources, nuclear
- Industry: mining, steel, engineering, food, construction
- Petrochemical: chemical refinery, fertilizers and plastics
- Infrastructure: railways, transport, roads and highways, tunnels and bridges, terminals, seaports, logistic hubs

Production brand of

Service

Atex offers a full service to support the development and maintenance of industrial plants and integrates design, engineering and production. Especially:

- Analyse and interpret any request through the experience of our staff
- Ad hoc design and innovative solutions
- 3D renderings
- Custom packing and shipping services on request
- Our supply package includes final Data Book and Certificates

Ex Regulations

Potentially Explosive Atmosphere

A potentially explosive atmosphere results to be a mixture of flammable gases, vapours, mists or dusts with oxygen which is generally present as a component of air.

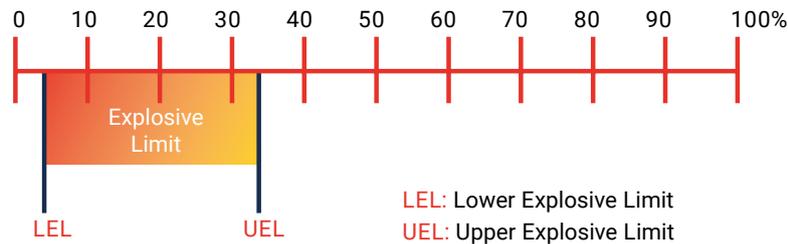

What conditions will create an explosion?

Three elements are required (see the explosion triangle diagram):

- Oxygen in the air
- Flammable substance, mixed with air (fuel). This substance can be :
 - gas (methane, acetylene),
 - liquid (petrol, solvent),
 - solid (sulphur, wood dust, sugar dust, grains dust...).
- Ignition source :
 - with sufficient energy, an electrical arc or a spark,
 - and/or a rise in temperature.

An explosion can only occur if the mixture (flammable substance + air) has the right concentration and an ignition source is present.

Level of flammable gas or dust in the air

What is the Explosive Limit of a Flammable Substance?

The ignition of a flammable substance depends on its concentration in the air.

It can be produced within a range between two limits :

- lower explosive limit (LEL) of a gas, vapor, mist or dust in the air is the minimum concentration above which the mixture could ignite.
- upper explosive limit (UEL) of a gas, vapor, mist or dust in the air is the maximum concentration under which the mixture could ignite.

Type of Ignition Sources

- Electric areas and spark
- Flames and hot gases
- Hot surfaces
- Electrostatic sparks
- Electromagnetic waves
- Mechanical friction
- Mechanical sparks produced by grinding
- Adiabatic compression and shock waves
- Optical radiation
- Electromagnetic radiation
- Chemical reactions
- Ultrasonic

Explosive atmospheres

- Metal surface grinding, especially aluminium dust and particles
- Oil refineries, rigs and processing plants
- Gas pipelines and distribution centres
- Printing industries, paper and textiles
- Aircraft refueling and hangars
- Chemical processing plants
- Grain handling and storage
- Sewage treatment plants
- Surface coating industries
- Underground coalmines
- Woodworking areas
- Sugar refineries
- Vessels / ships
- Power plants

Classification of Hazardous Areas

Hazardous areas are classified in Zones according to the frequency and duration of an explosive atmosphere.

This enables both selection of suitable equipment and appropriate electrical installation.

For gases, vapours, mists and dusts there are three identified zones:

ZONE	DESCRIPTION
Zone 0 and Zone 20	An area in which an explosive mixture of gas, vapour, mist or dust is continuously present or for long period or frequently
Zone 1 and Zone 21	An area in which an explosive mixture of gas, vapour, mist or dust is likely to occur during normal operation
Zone 2 and Zone 22	An area in which an explosive mixture of gas, vapour, mist or dust is not likely to occur in normal operation and if it occurs will only exist for a short time

IEC & ATEX

The relationship between Zones of application, ATEX Categories and IEC Equipment Protection Levels (EPL) is shown below:

ZONE OF USE	ATEX CATEGORY	IEC EPL
ZONE 0	Category 1G	Ga
ZONE 20	Category 1D	Da
ZONE 1	Category 2G	Gb
ZONE 21	Category 2D	Db
ZONE 2	Category 3G	Gc
ZONE 22	Category 3D	Dc

Gases and Vapours

Gases and vapours are classified as shown below. The possible number of chemical compounds is extensive and the list shown is only representative.

MINING	SURFACE INDUSTRY		
GROUP I	GROUP II		
	IIA	IIB	IIC
METHANE (GRISOU)	Propane	Ethylene	Acetylene
	Acetone	Methyl Ethyl Ketone	Hydrogen
	Toluene	Coal Gas	Carbon Disulphide

Group IIC is the most severe group. Hazards in this group can be ignited very easily indeed. Equipment marked as suitable for IIC is also suitable for IIB and IIA. Equipment marked as suitable for IIB is also suitable for IIA but NOT for IIC.

Dusts and Fibres (Group III)

Group III dusts are subdivided according to the nature of the explosive atmosphere for which it is intended:

GROUP	SUBSTANCE
IIIA	Combustible flyings
IIIB	Non-conductive dust
IIIC	Conductive dust

The presence of dust layers does not automatically lead to the dust zone. The likelihood of the dust layer being disturbed to create a cloud needs to be considered. Dust layers also need careful consideration in terms of ignition temperature. Because the dust layer can make the equipment under it hotter than normal, a factor of safety is applied to the layer ignition temperature.

Self ignition temperature of the hazardous material (Temperature Classes)

As well as considering the protection against electrical arcs and sparks igniting a flammable atmosphere, consideration needs to be given to the surface temperature of equipment. Flammable materials are categorized according to their ignition temperature. Again, rather than work with an infinite range, six temperature classes are defined as follows

TEMPERATURE CLASS	MAXIMUM SURFACE TEMPERATURE	IGNITION TEMPERATURE
T1	450°C	> 450°C
T2	300°C	> 300°C ≤ 450°C
T3	200°C	> 200°C ≤ 300°C
T4	135°C	> 135°C ≤ 200°C
T5	100°C	> 100°C ≤ 135°C
T6	85°C	> 85°C ≤ 100°C

Apparatus Groups and Temperature Classes for common flammable gases and vapours

GAS GROUP	TEMPERATURE					
	T1	T2	T3	T4	T5	T6
I	Methane (Grisou)					
IIA	Propane	Ethanol	Heptane	Benzaldehyde		
IIB	Hydrogen cyanide	Ethylene	Acryl aldehyde	Dibutyl ether		
IIC	Hydrogen	Acetylene				Carbon Disulphide

The maximum surface temperature decreases by increasing the “T” number.

The Temperature classification will be marked on items of equipment. If the hazardous area in which you are installing equipment has gases or vapors with a low auto ignition temperature then you will need equipment with a bigger T. Number so as to ensure that any hot surfaces on the equipment will not ignite the hazard.

For example, if a hazard has an auto ignition temperature of 180°C, then it would be safe to use equipment which is marked T6 or T5 or T4. It would not be safe to use equipment marked T3 or T2 or T1 as this equipment could exhibit surface temperatures which are hot enough to ignite the hazardous atmosphere.

Temperature Classes for common flammable dusts and fibers

When considering installation that are risk of a potential explosion due to dust ignition, the equipment used is classified in much the same way as with gases. No equipment should be installed where the surface temperature of the equipment is greater than the ignition temperature of the given hazard. Below there are some common dust hazardous and their minimum ignition temperature:

IGNITION TEMPERATURES FOR COMMON FLAMMABLE DUSTS AND FIBERS		
SUBSTANCE	IGNITION TEMPERATURE	
	CLOUD	LAYER
Sugar	490°C	460°C
Aluminium	590°C	> 450°C
Flour	490°C	340°C
Coal dust	380°C	225°C
Methyl cellulose	420°C	320°C
Grain dust	510°C	300°C
Starch	460°C	435°C
Phenolic resin	530°C	> 450°C
Soot	810°C	570°C

Protecting Electrical Apparatus to make it suitable for use in hazardous areas

Electrical apparatus for use in hazardous areas needs to be designed and constructed in such a way that it will not provide a source of ignition. Each Execution achieves its safety from ignition in different ways and not all are equally safe. In addition to the equipment being suitable for the Gas Group and the Temperature Class required, the Execution must be suitable for the zone in which it is to be installed. The different types of protection and the zones for which they are suitable are as follows:

TYPES OF PROTECTION FOR GAS				
EQUIPMENT CODE	PROTECTION CONCEPT	SUITABLE FOR ZONES	ATEX CATEGORY	IEC EPL
Ex ia	INTRINSIC SAFETY	0; 1; 2	1G	Ga

Ex d “Flameproof Enclosure”

Parts which can ignite an explosive atmosphere are contained within an enclosure into which the explosive atmosphere can enter but which will contain any resultant explosion and prevent its transmission outside of the enclosure.

Ex p “Pressurized Equipment”

The ingress of an explosive atmosphere in a housing containing electrical equipment, is avoided by maintaining a protective gas (air or an inert gas) at a slight overpressure to the surrounding atmosphere. The overpressure may or may not be maintained by continuous flow.

Ex q “Powder Filling”

All equipment that has the potential to arc or to spark is contained within an enclosure filled with quartz or glass powder particles. The powder filling prevents the possibility of an ignition.

Ex o “Oil immersion”

Electrical equipment or parts of it are immersed in oil, thus avoiding ignition of the explosive atmosphere above the oil surface or outside the housing. This protection method is rarely applied now.

Ex e “Increased Safety”

This protection method refers to equipment that does not ordinarily produce sparks and for which special precautions must be taken during construction. Unacceptably high temperatures must also be avoided, during both regular operation and certain irregular situations.

Ex i “Intrinsic Safety”

Intrinsic safety is intended for products in which the level of electrical energy circulating or stored in the product is insufficient to ignite a surrounding explosive atmosphere even under fault conditions. Because of the method by which intrinsic safety is achieved it is necessary to ensure that not only the electrical apparatus exposed to the potentially explosive atmosphere but also other electrical apparatus with which it is interconnected, is suitably constructed.

Ex m “Encapsulation”

With this protection method all parts that may ignite an explosive atmosphere, are encapsulated in a resin that is sufficiently resistant to ambient influences. Parts that could ignite an explosive atmosphere by means of sparks or heat are potted so as to prevent ignition of the explosive atmosphere.

Ex n “Non Sparking”

An execution where precautions are taken so that electrical equipment that has the potential to arc is not capable of igniting a surrounding explosive atmosphere. This can be further categorized as follows:

Ex nA - Where components used in construction are non sparking

Ex nC - Where components used in construction are non incendive

Ex nR - Where components used are tightly enclosed to restrict the breathing and prevent ignition

Ex op “Optical radiation”

This is primarily concerned with the control of pulsed and continuous wave optical radiation through fiber optic cable with restrictions on the ratio of emitted optical power to the irradiated area. The protection concepts include Inherently Safe which is analogous to Ex i and provides over-power/energy fault protection. Other methods include mechanical protection of the fiber and optical interlocks.

Ex t “Dust Protection by Enclosure”

This method is applicable to electrical equipment protected by enclosure and surface temperature limitation for use in explosive and dust atmospheres.

General comparison between IEC / CENELEC and NEC practice

CLASSIFICATION OF ZONES AND DIVISIONS				
DAINGEROUS EXPLOSIVE ATMOSPHERE	CONTINUOUSLY, LONG TERM OR FREQUENTLY	OCCASIONALLY	NOT LIKELY TO OCCUR AND FOR SHORT PERIOD ONLY	
GAS	IEC / CENELEC / NEC 505 NEC 500 (Class I)	ZONE 0	ZONE 1	ZONE 2
		DIVISION 1		DIVISION 2
DUST	IEC / CENELEC / NEC 506 NEC 500 (Class II, III)	ZONE 20	ZONE 21	ZONE 22
		DIVISION 1		DIVISION 2

NEC 500 SCOPE

Articles 500 through 504 cover the requirements for electrical and electronic equipment and wiring for all voltages in Class I, Divisions 1 and 2; Class II, Divisions 1 and 2; and Class III, Divisions 1 and 2 locations where fire or explosion hazards may exist due to flammable gases, flammable liquid–produced vapors, combustible liquid–produced vapors, combustible dusts, or ignitable fibers/flyings.

NEC 506 SCOPE

Article 506 is an alternative Classification System to Class II, and Class III that is based on the International Electrotechnical Commission System (IEC). Zones 20, 21 and 22 apply to combustible dusts or ignitable fibers/flyings. Combustible metallic dusts are not covered by Article 506.

NEC 505 SCOPE

Article 505 is an alternative to the method of area classification for Class I locations as permitted in Article 500. The Zone Classification System is based on that of the International Electrotechnical Commission (IEC).

6	Complete protection against ingress of dust	6	Protection against powerful water jets
-	-	7	Protection against temporary immersion in water
-	-	8	Protection against indefinite immersion in water

The IECEx Scheme

The IECEx scheme is an international certification scheme based on the use of IEC standards. This is now well established and has a large group of participants including all the major manufacturing countries. In each member country, test laboratories and certification bodies have been vetted and joined the scheme. These organizations now accept each other's test reports prepared under the scheme and issue certificates of conformity with IEC standards. The certificates will carry the IEC certification mark. The ultimate objective is the acceptance of one certificate regardless of origin to show that explosion proof equipment is safe for use. A fundamental requirement of the scheme is that participating countries align their national standards with IEC.

CCF and GUB enclosures are suitable to build Ex d / Ex de switchboards of different configuration in compliance with customer specification like:

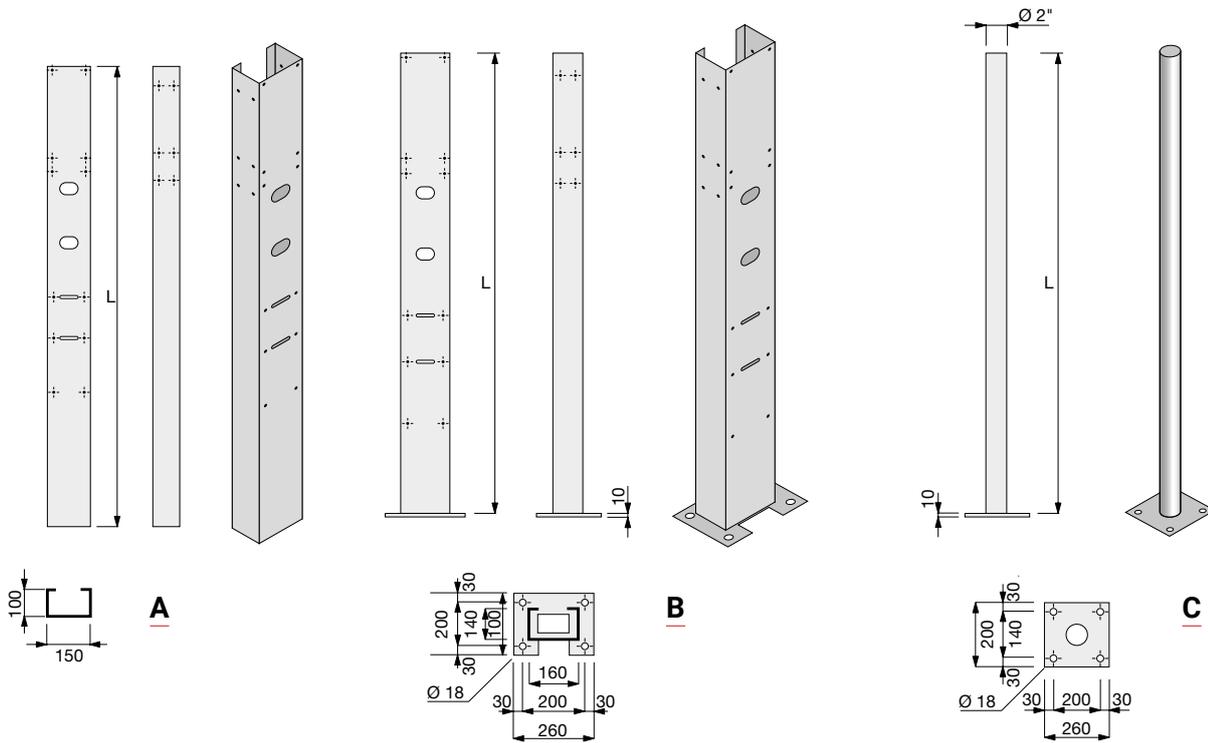

- lighting distribution
- power distribution
- heat tracing
- motor starter

Installation area: 1 – 2 / 21 – 22

Material: copper free aluminium, stainless steel, GRP

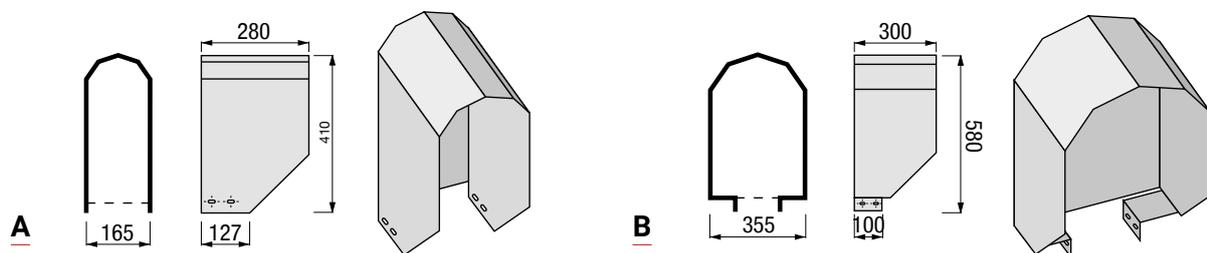

Supports

Material: Steel, hot dip galvanized after working.

Single seal cable glands for unarmoured and shielded cables series PNAN

Execution:

Ex d / Ex e / Ex ia IIC Gb
Ex tb IIIC Db IP66

Protection degree: IP66

Atex applicable standards:

EN 60079-0, EN 60079-1, EN 60079-7,
EN 60079-31

IECEx applicable standards:

IEC 60070-0, IEC 60079-1, IEC 60079-7,
IEC 60079-31

Ambient temperature:

-60°C / +80°C with silicone sealing rings

Installation area: zone 1 – 2 (Gas)
zone 21 – 22 (Dust)

Material: Nickel plated brass or
Stainless steel

Double seals barrier cable glands for armoured cables with lead sheath

Execution:

Ex d / Ex e / Ex ia IIC Gb
Ex tb IIIC Db IP66

Protection degree: IP66

Atex applicable standards:

EN 60079-0, EN 60079-1, EN 60079-7,
EN 60079-31

IECEx applicable standards:

IEC 60070-0, IEC 60079-1, IEC 60079-7,
IEC 60079-31

Ambient temperature:

-40°C / +90°C with EPDM sealing ring
-60°C / +180°C with silicone sealing ring

Installation area: zone 1 – 2 (Gas)
zone 21 – 22 (Dust)

Material: Nickel plated brass or
Stainless steel

Standards of construction:

ANSI C80.1, UL 6

Standards of use:

NEC: Art. 344 Rigid Metal Conduit, Art. 250.118 (2)
 NEC: Art. 501.10 (A) (1) and (B) (1)
 Class I Div. 1 & 2, Art. 502.10(B) (1)
 Class II Div. 2, Art. 503.10 (A) (1) and (B)
 Class III Div. 1 & 2

Material: Hot dip galvanized steel

On request aluminium, stainless steel
 AISI 304 or AISI 316

Description: Threaded electrical conduits designed according to Art. 344 ANSI/NFPA 70 "National Electrical Code" (NEC). These conduits are used for high mechanical protection and routing of conductors and cables. They reduce electromagnetic field exposure, shields against electromagnetic interference.

Material: Aluminium

Description: The bushings are screwed at the end of the conduit pipe, thereby acting as a form of «cable protection»; that is, they stop the cable from being damaged by rubbing against any rough edges that may be present in the pipe. The thread used is GAS (UNI ISO 228).

Gas explosion execution:

Ex d IIC T6 Gb
(suitable for Zone 1 and Zone 2)

Dust explosion execution:

Ex tb IIIC T80°C Db IP66
(suitable for Zone 21 and Zone 22)

Degree of protection: IP66

Applicable standards:

EN 60079-0 ; EN 60079-1 ; EN 60079-31

Earthing protection:

M5 (internal and external earth bolts)

Power controller:

Wide voltage input, CC-CV
(constant current – constant voltage)
output, power factor ≥ 0.98 , with function
of distributed current, constant current,
surge-proof and anti-electromagnetic
interference, protection against
overcurrent, open circuit and short circuit.

Lamp power:

9W x 1 ; 9W x 2 ; 18W x 1 ; 18W x 2

Rated voltage: 110 ÷ 265V 50/60Hz

Terminals: 3 x 1,5 ÷ 4 sqmm (L+N+PE)

Cable entries: 2 x M25

Ambient temperature: -40°C / +55°C

Material:

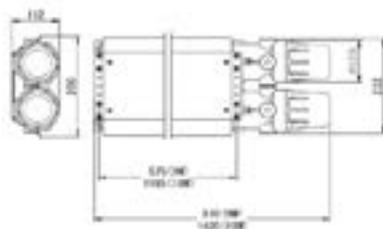

Enclosure - Copper free aluminium,
powder coated surface yellow colour
RAL 1021

Glass tube - Toughened glass
Wire guard (optional) - Powder coated
carbon steel (white) or stainless steel
Exposed fastener - Stainless steel

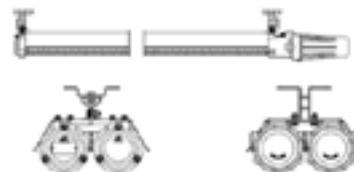

Mounting: Ceiling type; pole type

1 x 1" NPT (with pole mounting)
2 x 3/4" (with universal bracket)

Power supply: 48W 100-270 Vac 700mA, frequency 50 ÷ 60 Hz ± 5% (6 LED)

Lamp type:

6 LED DA 8W – minimum brightness 5500lm approx., LED type "Cold-white" – EFFICIENCY > 83% equivalent to 500W incandescent lamp

Internal wiring: high-temperature resistant silicon rubber insulation cables

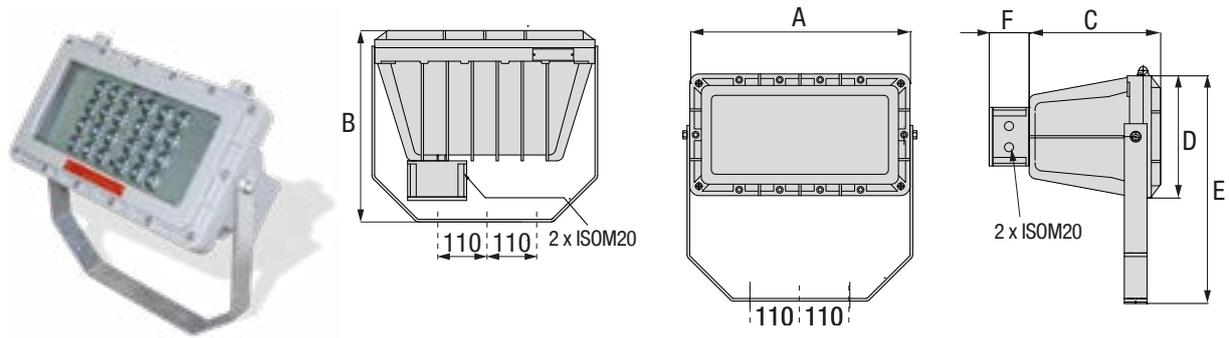

Ambient temperature: -60°C / +60°C

Material:

Body - copper free aluminium with epoxy powders paint RAL 9006
Globe - high-temperature resistant borosilicate glass
External screws - stainless steel
Gaskets - silicon rubber

Installation area: Zone 1 - 2 (Gas)
Zone 21 - 22 (Dust)

CODE	LED NUMBER	LAMP POWER (W)	LAMP HOLDER TYPE	CABLE ENTRY SIZE	DIMENSIONS (mm)				WEIGHT (Kg)	FIGURE

Execution:

II 2 G Ex d IIB+H2 T4
II 2 G Ex de IIB+H2 T4

Degree of protection: IP66

Cable entries:

M25 / 3/4"NPT

Power supply: 192W 230Vac frequency
50Hz (cos p ≥ 0,98)

Lamp type:

24 LED by 8W (700 mA) – luminous flux
25000lm – LED type "cold-white" equivalent
to 400W HPNA/MH lamp porcelain E40 size

Internal wiring: high-temperature resistant
silicon rubber insulation cables

Terminals: suitable up to 4 sq/mm cables

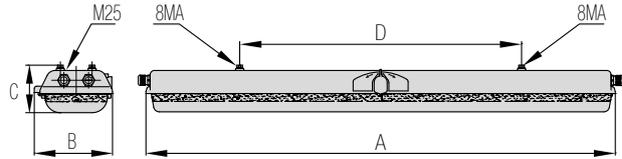

Ambient temperature: -20°C / +60°C

Material:

Body - copper free aluminium with
epoxy powders paint RAL 9006
Diffuser - tempered front glass
Support - adjustable type hot dip
galvanized steel
Reflector - internal polished aluminium
External screws - stainless steel
Gaskets - silicon rubber

Installation area: Zone 1 - 2 (Gas)
Zone 21 - 22 (Dust)

II 2 D Ex tb IIIC T80°C Db

Degree of protection: IP66

Cable entries: ISO-Metric complete with cable glands M25 and plug

Power supply: electronic ballast 96...254V AC 50/60Hz (cos $\rho \geq 0,95$)

Lamp holder: bi-pin G13 cap

Internal wiring: high-temperature resistant silicon rubber insulation cables

Terminals: suitable up to 4 sq/mm cables

Emergency unit: with protections against over charge and over discharge

Ambient temperature: -20°C / +60°C

Material:

Body - glass fibre reinforced polyester resin self-extinguishing acc. to UL94

Diffuser - U/V resistant polycarbonate

Safety closing - operated by hexagonal key

Gaskets - EPDM 60 rubber suitable for high temperatures and resistant to environments conditions

Internal reflector - white stove enamelled sheet aluminium

Installation area: Zone 1 - 2 (Gas)
Zone 21 - 22 (Dust)

Installation area: zone 1 – 2 (Gas)

zone 21 – 22 (Dust)

Lampholders: porcelain E27 size

Internal wiring: high-temperature resistant silicon rubber insulation cables

Terminals: suitable up to 4 sq/mm cables

Medium intensity: flashing obstruction light 1450 / 2000 cd intensity (over than 45mt distance) - RED 230 Vac

Low intensity: steady obstruction light 30 cd intensity (less than 45mt distance) - RED 230 Vac

Construction: single awl – twin awl (1 main + 1 spare) in according to ICAO standard

Body: copper free aluminium

Globe: high-temperature resistant borosilicate glass

Fresnel len: shock proof acrylic material suitable for high temperature

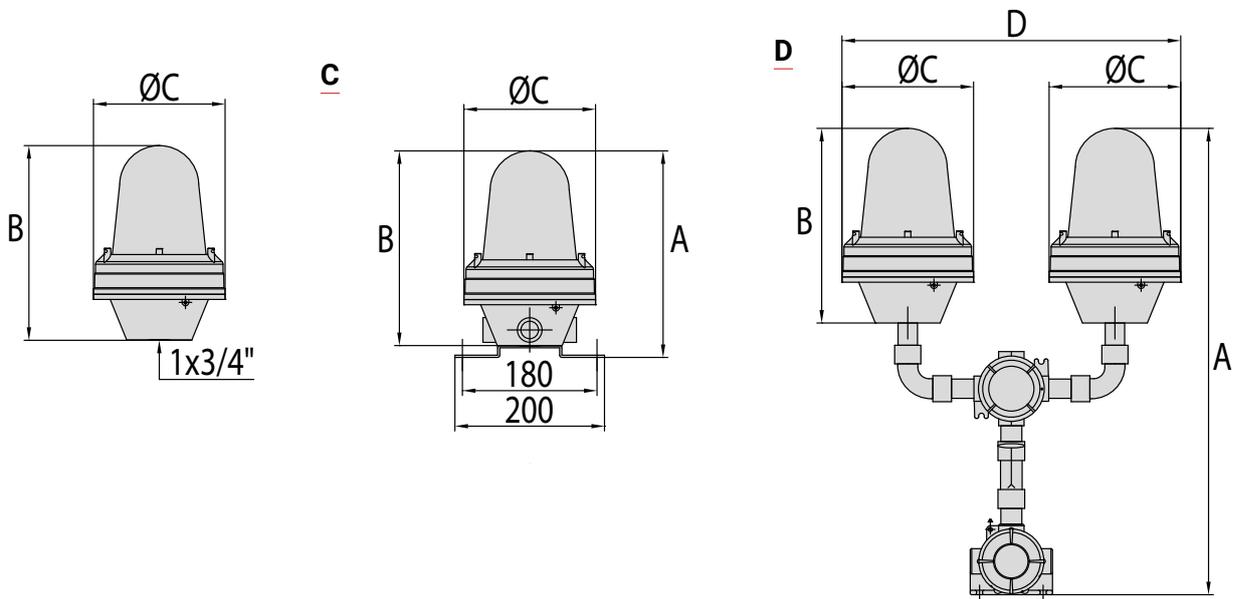

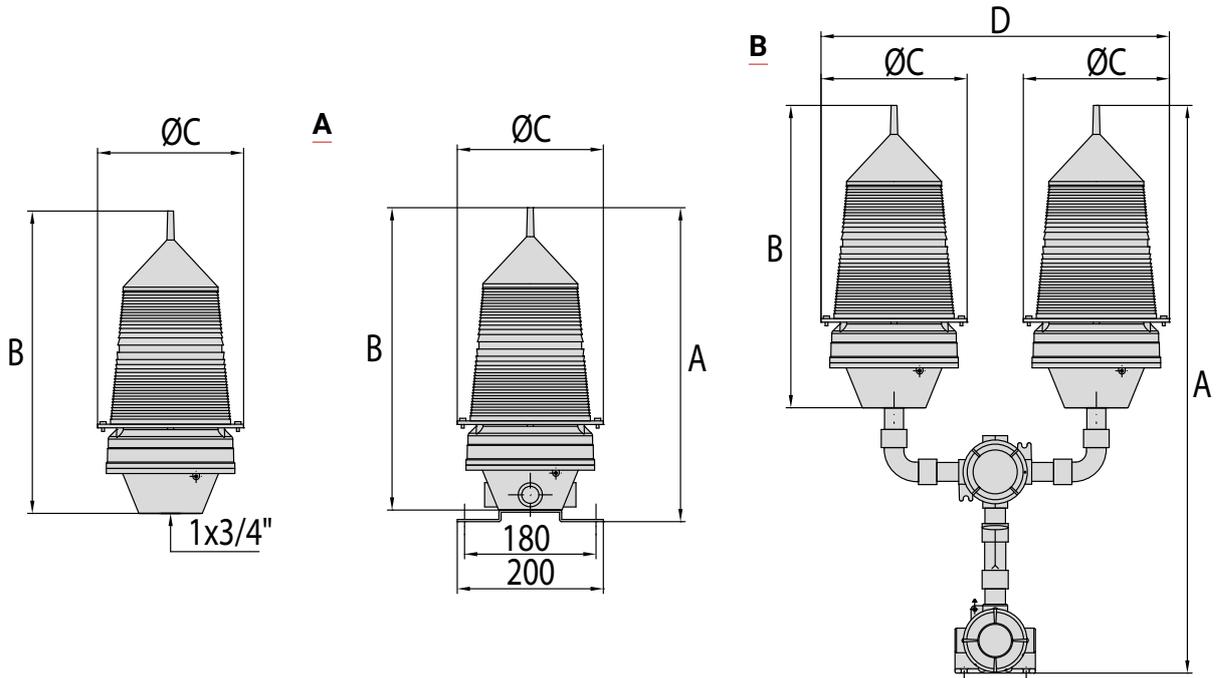

External painting: epoxy powders RAL-9006

External screws: external stainless steel

Gaskets: silicon rubber

Cable entry: 3/4" NPT

Medium intensity and low intensity multiled system aircraft warning lights

Execution:

II 2 G Ex d IIC T6 Gb
II 2 G Ex tb IIIC T85°C Db

Protection degree: IP66

Ambient temperature:

-60°C / +60°C

Installation area: zone 1 – 2 (Gas)
zone 21 – 22 (Dust)

LEDs: separate groups with individual LED protection system – LED technology stabilized by constant current generator

Medium intensity: flashing light with intensity 2000 cd (+/- 25%) flashing 40 flash/minute

Low intensity: steady burning with intensity 32 cd (flashing on request)

Construction:

- single group LEDs system with own reflector;
 - dual groups LEDs system, each group with own reflector (1 main + 1 reserve)
- Horizontal beam radiation: 360°

Vertical beam radiation: between 3° and 10°
Efficiency: >91%

Life time: long life time – more than 10 years

Body: marine grade copper free aluminium

Globe: high-temperature resistant borosilicate glass

External painting: epoxy powders RAL-9006

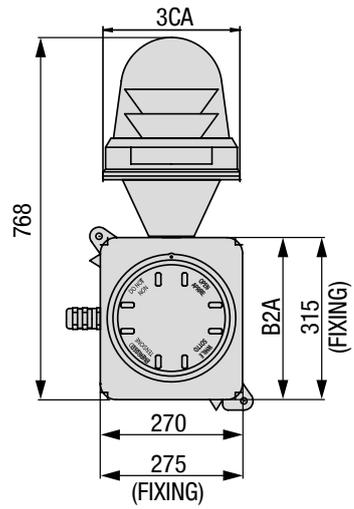

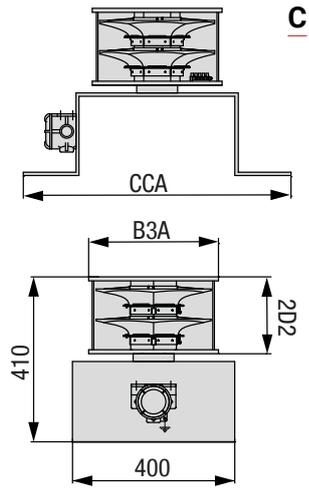

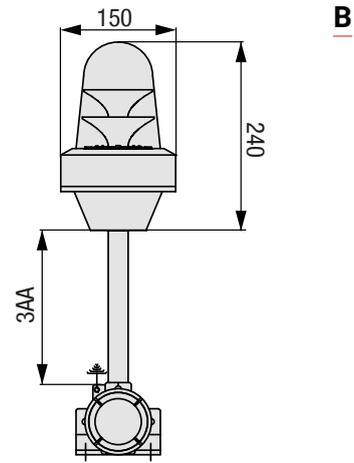

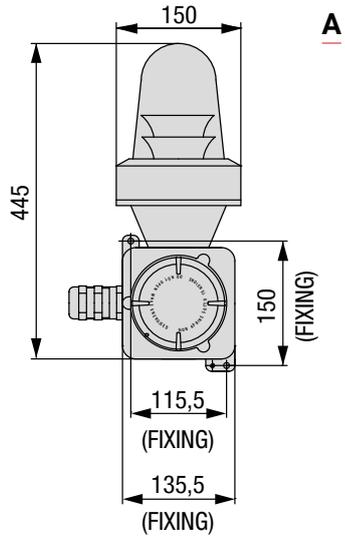

External screws: stainless steel

Gaskets: silicon rubber

Cable entry: 3/4" NPT

Protection degree: IP66

Ambient temperature: -20°C / +50°C

Installation area: zone 1 – 2 (Gas)
zone 21 - 22 (Dust)

Material: copper free aluminium

External coating: polyester RAL 3020

Thread: M25x1,5

Light colours: blue, orange, red, green, yellow, clear

FPM:

- STEADY 0
- 1F 120±10
- 2F 2 x 90±10
- 3F 3 x 140±10

Small size integrated LED beacon, ideal for alerting a change in machinery operational circumstances in explosive atmospheres.

Fitted with an electronic SMD LED circuit is particularly resistant to vibrations guaranteeing longer lifetime of the product and a significant reduction in maintenance costs.

Multifunctional product allowing 4 different light options: steady, single flash, double flash, triple flash selectable via internal dip-switch.

Execution:

II 2G Ex d e IIC T6 Gb

Protection degree: IP66

Ambient temperature: -25°C / +50°C

Installation area: zone 1 – 2 (Gas)
zone 21 - 22 (Dust)

Material: copper free aluminium

External coating: polyester RAL 3020

Thread: M25x1,5

Light colours: blue, orange, red,
green, yellow, clear

FPM: 160±30

Traditional flashing beacon with either a filament bulb or halogen bulb.

Large size beacon ideal for alerting a danger situation or a change in machinery operational circumstances in explosive atmospheres.

Ex cable reels

Execution: Ex de IIC T6

Installation area: 1 – 2

Dimensions: 300 x 410 x 230mm

Cable reel Ex is suitable for zones 1 and 2. The cable reel is made of hard butyl rubber, material which ensures high mechanical load capacity. Furthermore, the cable reel is resistant to oils and acids.

The use of cable reel Ex in explosion group IIC is only permitted if the cable is first connected or the cable reel is standing on a conductive base or conductive and earthed base.

Dependable multigas detector tests for LEL, oxygen, carbon monoxide, nitrogen sulfide, sulfur dioxide and nitrogen dioxide
 Economical construction saves users more than 50% on calibration gas, replacement sensors and maintenance
 Four-year sensor life means detector lasts 60% longer than the industry average
 Unit uses 50% less calibration gas per minute than the average detectors within the industry
 Two-tox CO/H2S sensor removes practically all cross-channel interference
 Large buttons and high-contrast screen make operation easy in low-light conditions
 Ribbed rubber housing provides secure grip and high durability
 Unit features 95+ db alarm and ultra-bright LEDs
 Exclusive end-of-sensor warning cautions user when unit's sensor needs to be changed
 MotionAlert option tells others that user has become immobile
 InstantAlert provides manual alarm to alert others of a dangerous situation

Detects combustible gases in LEL and/or volume percentage range, oxygen, carbon monoxide, carbon dioxide, hydrogen sulfide, sulfur dioxide, ammonia, chlorine, VOCs, and many others depending upon sensor configuration.

Rugged overmolded polycarbonate housing provides unsurpassed durability, including ability to survive 10-ft. (3m) drop; IP65-certified.

Field-proven integral pump provides consistent gas flow, eliminating concerns of externally-attached components.

High performance XCell Sensors last longer:

Typical life greater than 4 years for combustible, O₂, CO/H₂S, SO₂, CO/NO₂ and CO (high concentration) sensors.

Typical life greater than 3 years for NH₃ and Cl₂ sensors.

Most sensor response and clear times <15 seconds.

Less calibration gas used: Requires about half of test gas typically used for calibration and bump tests.

Rapid bump test gives results in less than 10 seconds for most common sensor configurations.

Span calibration time of 60 seconds for most common sensor configurations.

MotionAlert feature option tells others that user has become immobile.

InstantAlert feature provides manual alarm to alert others as to a potentially hazardous situation.

PID option allows for accurate, reliable VOC response with programmable reference factors.

Large buttons and bright display provide easy operation, even when users wear gloves.

Exclusive end-of-sensor warning cautions users when unit's sensor nears end-of-life.

Versatile MSA Link™ Software allows users to transmit data to a computer.

Wireless bluetooth included standard.

ANSI/ISA 12.12.01 / CAN/CSA E60079-0

CAN/CSA E60079-11

Display: LCD da 9 cm

Protection Cover: Rubber material EPDM

Carrying loops: High-temperature resistant material

Housing material: High-temperature resistant lastic

Protection class: IP 67

Type of sensor: a.Si Microbolometer array

Resolution: 384 x 288 pixel

IR spectral: 7 to 14 um

Temperature sensitivity: Typically 0.035°C

Picture frequency: 50 HZ

Fosus: 1 m to infinity

Field of view: Horizontal 57° / vertical: 41°

/ Diagonal: 74°

Temperature Measurement: Digital

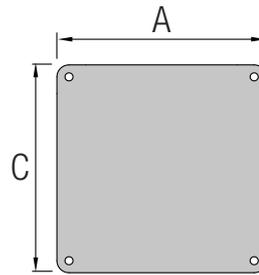

temperature display -40°C1,000°C

Operating temperature: 40° C to 85°C

Battery: rechargeable lithium ion batteries

CODE	DIMENSIONS	WEIGHT
09.03.00.31.08.00000	125 x 280 x 110	1.4 kg (3 lib.) incl. battery

Protection degree: Waterproof IP66

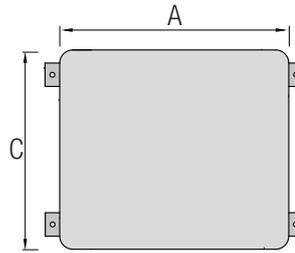

Ambient temperature: -55°C / +60°C

Applicable standards:

EN 60079-0, EN 60079-7,
EN 60079-11, EN 60079-31

Material: GRP Black Ral 9005

Atex srl switchboard panels comply with international standards and are made according to customer specifications. All products comply with international and CEI standards.

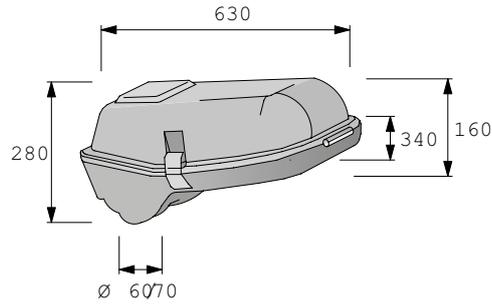

Switchboard solution are made our internal technical department, in compliance with requisition of project.

Services provided:

- Planning
- Wiring
- Test
- Packing and shipment
- Technical documentation

Protection degree: IP55 - IP65 - IP66

Body in thermo-plastic material, grey colour.

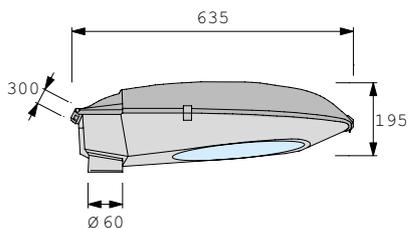

Adjusting holder in die-cast aluminium.

Flat transparent glass diffuser, 5 mm thick, tempered, heat-proof and crash-proof.

Silicone gaskets. Reflector in pure aluminium 99.8%, 0.8 mm thick, with anodized and polished surface. Cut-off optic. Outside bolts and screws in inox steel. This streetlight can be installed on either horizontal or vertical poles, with diameter Ø 76mm to Ø 60mm. Goniometer for inclination adjustment: it can be oriented from -5° to +15° on vertical pole and from -15° to +15° on horizontal pole. Routine and unscheduled maintenance are easier, thanks to the 3 clips opening system of the upper body. Opening rotation of the upper body is on the road side. Supporting tray for electrical control gear removable and equipped with fast connectors, is in thermoplastic material. Pre-adjustment for darkness sensor. Streetlight available in insulation class II.

Protection degree: IP65.

Body in die casting of aluminium, painted with RAL 7035 epoxy powders, blank previously phosphochrome plated.
 Reflector made of pure anodised and printed aluminium.
 Diffuser made of fl at tempered glass (5 mm thick).
 Silicone gaskets are placed on glass and on the accessories box.
 Suitable for poles installation Ø 60 mm.
 Adjustable inclination with the rotating system in pressure die casting aluminium.
 External screws and clock work made of stainless steel. Lamp holder E40 made of ceramic, it is placed in a removable aluminium glass, it can be opened withturn without the usage of tools.
 Power supply placed in a glass-nylon plate for Class II and in galvanized iron for Class I.

Protection degree: IP54.

Base body in polyester resin reinforced with fibre glass in light grey colour with seal gasket in polyuretanic resin. Diffuser in transparent self extinguishing acrylic material injection printed with inner prismatizing. Hooks made of plastic or on request stainless steel. Reflector in steel sheet oven painted with epoxy polyester powders, with advance phosphatazing, in white colour, used for the connections support fixed to the body through to keys in selfextinguishing material and equipped with: security nylon ropes (loosing the two keys the reflector will be unhooked remaining hanged to the body), one cable-gland PG13,5 complete with nut and seal and two hanging rings.

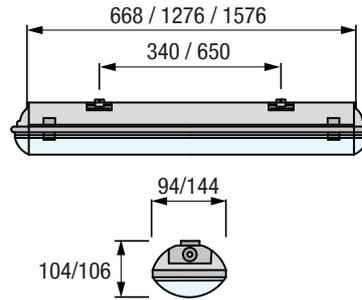

Protection degree: IP65.

Stainless steel AISI 304 fixture.

Temperate glass diffuser with mechanical protection IK-10. White painted galvanised steel reflector. Versions with electromagnetic power supply with p.f. correction capacitor.

Emergency versions with permanent wiring, Ni-Cd battery, inverter, 1H autonomy, 24h recharge with possibility of inhibition.

Lamp-holder G13. Cable gland PG13,5 polyamide.

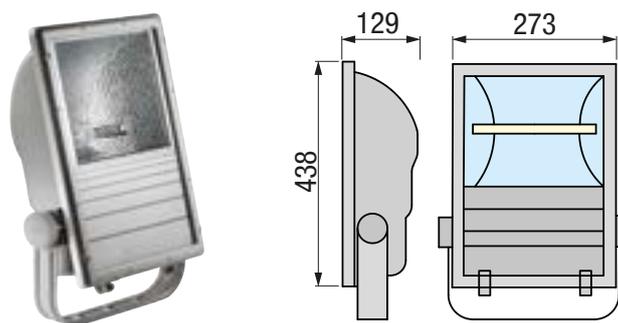

Accessories for pendant installation, on pole, on wall or ceiling.

Protection degree: IP65.

Die-cast aluminium body with wide cooling fins.
 Die-cast aluminium rim. Steel support bracket.
 Polyester powder paint resistant to corrosion, atmospheric conditions and salt spray fog.
 Anode polished and oxidated 99,85 planished aluminum reflector symmetric and asymmetric flux
 Thermal-shock resistant tempered glass diffuser.
 Corrected wiring on removable zinc-plated steel plate. PG 13,5 cable gland.
 Stainless steel external screws. It complies with the EN 60598-1 and EN 60598-2-5 Standards.
Protection degree: IP65.

Body in aluminium die cast: painted with epoxy powders of black color after phospho chromatising of the blank, resistant to corrosin atmospheric factors.

Protection degree: IP 65.

Mounting bracket in steel, with goniometric setting system of inclination. Symmetric, asymmetric reflector in hammered, polished and anodised aluminium 99,80%. Tempered closing glass thickness 5 mm, crash and thermal shock resistant, linked to the body through hooks in extruded aluminium plated of the color of the body and with black zip in galvanised steel. Holding gaskets stuck with silicon, to assure the best water-proof holding. External screw in stainless steel. Including cable gland PG 13,5.

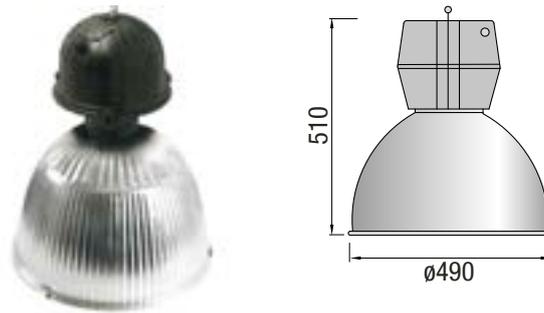

Lamp holder in ceramic E40.

Control gear included in the floodlight.

Protection degree: IP66.

Body and cover in die casted aluminium equipped of steel safety chains.

External screws in stainless steel, hanging hook in galvanized steel complete with sliding bar for the floodlight balancing.

Painted in polyester powders.

Diffuser in temperate glass (th.4mm) resistant to thermal shocks, fixed on the floodlights with blocking clips in nicheled steel and silicon rubber gasket.

The diffuser is hanged to the fitting body through galvanized steel external chain.

Reflector shaped in aluminium 99,8% oxidated and anodically polished for an high lighting rendering. Wide beams.

Connection holder plates inside the heads with electrical parts.

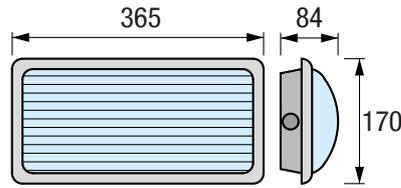

Lamp holder in ceramic E40.

Cable holder PG11 for three poles cable sect.

1,5 mm (Ø 8/10 MAX).

Protection degree: IP65.

Lighting fittings with body made of techno polymer thermo resistant and anti shock, flame resistant chemical and atmospheric agents.
 Feeding: 230 V - 50 Hz.
 Recharge: 12 h. - minimum autonomy 1 h and 3 h.
 Ni - Cd batteries at high temperature 1,5 Ah (foreseen life batteries: 4 years).
 Luminous indicator for power presence and correct recharging.
 Recharging finish protection circuit.
 Suitable mounting on flammable surfaces.
 According to EN60598-1 / EN60598-2-22
 (CEI 340-21 / CEI 34-22).
Protection degree: IP65.

Polycarbonate body RAL 7035.
 Nylon or stainless steel clip fix (on request).
 Polyurethane sealing gasket.
 Polycarbonate diffuser, UV resistant; stainless steel fixing accessories.
 Electronic ballast 230 V - 50/60 Hz; EEI A2.
 T° color 4000K (different T° on request)
 IRC > 80

Protection degree: IP66

Classification

Manufactured in compliance with CEI EN 61386-1 and 61386-23

Significant classification codes: 3 3 5 6

Resistance to compression: Medium (750 N)

Resistance to impact: Medium (2 J)

Corrosion resistance: Medium

Tensile strength: Medium (500 N)

Suspended load capacity: Heavy (450 N)

Protection degree: IP40

Electrical properties: Electrical continuity guaranteed

Characteristics

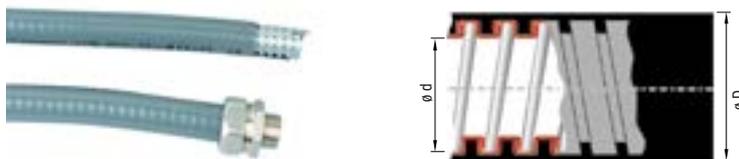

Simple interlocking flexible conduits made from a helical ribbon of Sendzimir continuous hot-dip zinc coated strip (UNI EN 10327).

They are extremely flexible and have an excellent mechanical resistance. The coils are packed in cartons.

Ambient temperature: +70/-15 °C

Simple interlocking metal flexible conduits coated in smooth PVC

Classification

Manufactured in compliance with CEI EN 61386-1 and 61386-23

Significant classification codes: 3 4 3 1

Resistance to compression:

Heavy (1250 N) until 00002634
Medium (750 N) from 00003543

Resistance to impact: Heavy (6 J)

Tensile strength:

Medium (500 N) until 00001521
Heavy (1000 N) from 00002027

Suspended load capacity: Heavy (450 N)

Self-extinguishing: flame retardant

Protection degree: IP66/IP67

Electrical properties: Electrical continuity guaranteed.

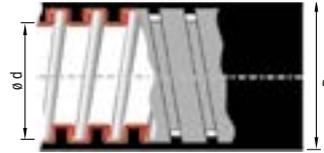

Characteristics

Simple interlocking flexible conduits made from a helical ribbon of Sendzimir continuous hot-dip zinc coated strip (UNI EN 10327), self-extinguishing PVC.

Resistant to most types of oils and greases, they are extremely flexible and have excellent levels of mechanical resistance.

Ambient temperature:
+70/-15 °C

Classification

Manufactured in compliance with CEI EN61386-1, CEI EN 61386-23, UNI CEI 11170-3:2005 Standards.

Significant classification codes: 3 4 4 1

Resistance to compression:

Heavy (1250 N) until 00002634

Medium (750 N) from 00003543

Resistance to impact: Heavy (6 J)

Tensile strength:

Medium (500 N) until 00001521 code

Heavy (100 N) until 00002027

Suspended load capacity: Heavy (850 N)

Self-extinguishing rating in compliance with CEI EN 61386 standard: Flame Retardant

Fume Emission F1 in compliance with NF F 16-101 standard

Protection degree: IP67

Electrical properties: Electrical continuity guaranteed.

Characteristics

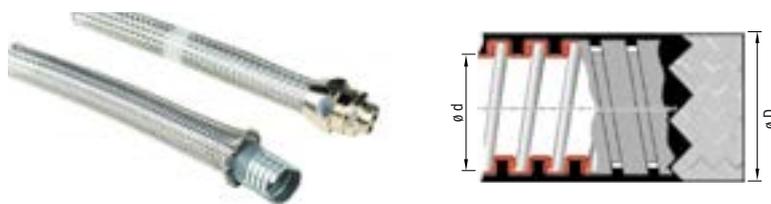

Flexible conduits made from Sendzimir galvanized steel ribbon (UNI EN 10327 Standard), with helicoidal profile and simple interlocking.

The coating is made of thermoplastic Eva which is a flame retardant material with a low level of toxics and corrosive gas emission, halogen-free, with a smooth external surface and thread fastening. These conduits are resistant to common oils and grease and have good flexibility and good mechanical resistance.

Ambient temperature: +70/-15 °C

Medium (500 N) until 00001521
Heavy (100 N) until 00002027

Suspended load capacity: Heavy (850 N)

Self-extinguishing rating in compliance with CEI EN 61386 standard: Flame Retardant Fume Emission F1 in compliance with NF F 16-101 standard

Protection degree: IP66/IP67

Electrical properties: Electrical continuity guaranteed.

EMC Shielding in compliance with IEC TS 61587 Standard: 30-230 MHz Level 1 (Minimum abatement 35 dB)

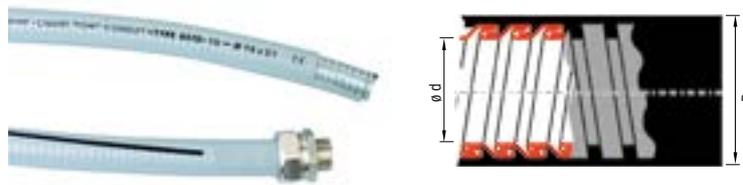

Characteristics

Flexible conduits made from Sendzimir galvanized steel ribbon (UNI EN 10327 Standard), with helicoidal profile and simple interlocking. The coating is made of thermoplastic Eva which is a flame retardant material with a low level of toxic and corrosive gas emission, halogen-free, with a smooth external surface and thread fastening. They are protected by an AISI 304 stainless steel metal braid, that renders the conduit highly resistant to wear, abrasion and electric sparks. These conduits are resistant to common oils and grease and have good flexibility and good mechanical resistance. They also offer good protection against electromagnetic interference across a large wave band.

Ambient Temperature: +70/-15 °C

Double interlocking metal flexible conduits coated in smooth PVC

Classification
 Manufactured in compliance with CEI EN61386-1 and CEI EN 61386-23
 Significant classification codes: 4 4 3 1
 Resistance to compression: Heavy (1250 N)
 Resistance to impact: Heavy (6 J)
 Tensile strength: Heavy (1000 N)
 Suspended load capacity: Heavy (450 N)
 Self-extinguishing: Flame Retardant
 Protection degree: IP66/IP67

Electrical properties: electrical continuity guaranteed and insulating properties
 Characteristics
 Double interlocking flexible conduits made from a helical ribbon of Sendzimir continuous hot-dip zinc coated strip (UNI EN 10327 Standard), and externally coated in smooth and self-extinguishing PVC.
 Resistant to most types of oils and grease, they present a good flexibility and a really good mechanical resistance when subjected to traction stresses.
 Ambient temperature: +70/-15 °C

Classification

Manufactured in compliance with CEI EN61386-1 and CEI EN 61386-23

Significant classification codes: 0 2 3 1

Resistance to impact: Light (1 J)

Self-extinguishing: flame retardant

Protection degree: IP67

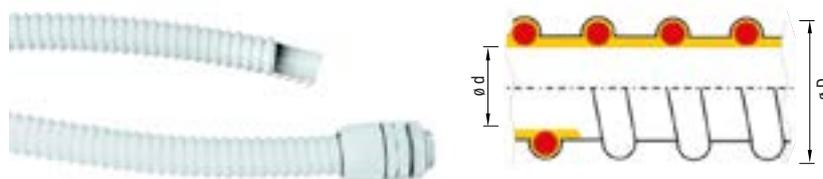

Characteristics

PVC flexible conduits having an excellent resistance to most oils, greases and diluted acids and in particular to ageing. Protected with a braid of steel wire that offers high levels of protection against wear and tear.

Standard braiding: galvanized steel wire

Ambient Temperature: +70/-15 °C

Classification

Manufactured in compliance with CEI EN61386-1 and 61386-23

Significant classification codes: 1 3 1 1

Resistance to compression:
Very light (120 N)

Resistance to impact: Medium (2 J)

Self-extinguishing: flame retardant

Protection degree: IP65

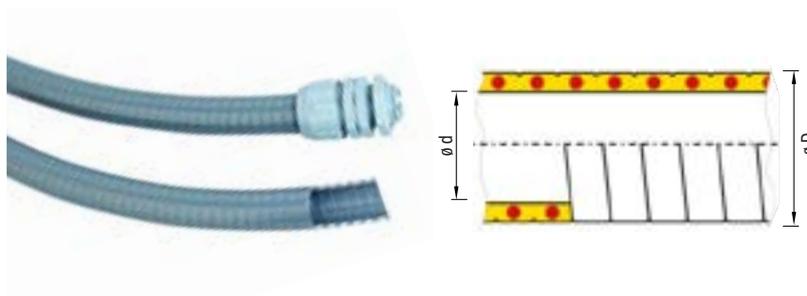

Characteristics

PVC plasticized flexible conduits, reinforced with rigid, impact-resistant helical PVC.

Resistant to most oils, greases and diluted acids and in particular to ageing. Internal surfaces are smooth and external surfaces are corrugated.

Ambient Temperature:
+70/-15 °C

11.22.09.07.00006068	60,0	68,0	30

Classification

Manufactured in compliance with CEI EN61386-1 and 61386-23

Significant classification codes: 2 3 1 1

Resistance to compression: Light (320 N)

Resistance to impact: Medium (2 J)

Self-extinguishing: flame retardant

Protection degree: IP65

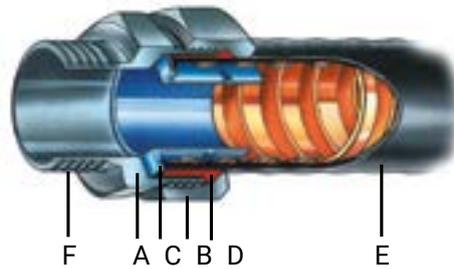

Characteristics

Extra thick, plasticized PVC plasticized flexible conduits, reinforced with rigid, impact-resistant helical PVC.

Resistant to most oils, greases and diluted acids and in particular to ageing. Both internal and external surfaces are smooth.

Ambient Temperature: +70/-15 °C

A: Nickel plated brass connector body
 B: Nickel plated brass tightening nut
 C: Galvanised "zamak" metallic contact base
 D: Nylon locking bushing
 E: Flexible conduits
 F: Thread

Classification
 Manufactured in compliance with CEI EN 61386
 Tensile strength: Heavy (1000N)
 Suspend load capacity: Heavy (450N)

Protection degree:
 IP67
 IP65 for connectors with threads bigger than 2"
 Electrical properties: Electrical continuity guaranteed
 Ambient Temperature:
 +70/-15°C

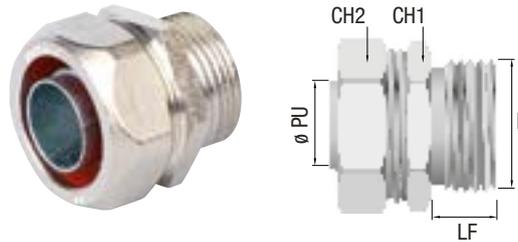

Characteristics

Made of brass which is then nickel plated in order to improve resistance to the harsh environmental conditions in which they are to be used.

The connector is coupled to the flexible conduit by means of a base that is screwed into the conduit in order to guarantee both high levels of resistance against traction and electrical continuity as required by CEI standards. The external locking of the flexible conduit is ensured by a nylon truncated conical shaped bushing that guarantees an IP 67 rating water tightness (IMQ Report n°1381) To cope with different installation requirements, the following types are produced: fixed male, swivelling male and fixed female. Suggested threads are: ISO metric in compliance with CEI EN 60423 (IEC60423), UNI ISO 228 GAS cylindrical, ISO 7/1 (ex UNI339) GAS tapered, PG in accordance with DIN 40430, and with an NP ANSI B2.1 thread.

The particular care and attention that goes into producing these connectors ensures a perfect fitting of cables without any risk of coating damage

Fixed male connectors for metal flexible conduits

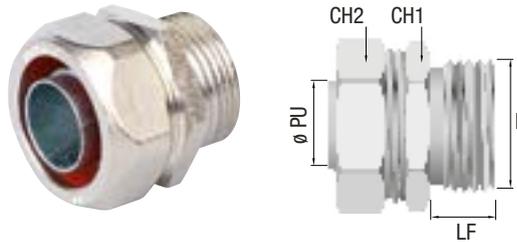

Ambient Temperature: +70/-15°C

Classification

Manufactured in compliance with CEI EN61386-1, CEI EN 61386-21, CEI EN 60423 Standards.

Significant classification codes: 5 5 4 5

Resistance to compression: Very Heavy (4000 N)

Resistance to impact: Very Heavy (20 J)

Tensile strength: Heavy (1000 N)

Suspended load capacity: Heavy (450 N)

Protection degree: IP66/IP67

Corrosion Resistance: 2 (Medium)

Electrical properties: Electrical continuity guaranteed

EMC Shielding in compliance with IEC TS 61587: 30-230 MHz. Level 2 (Minimum abatement 50 dB)

Characteristics

Electro-coupled conduits made from Sendzimir continuous hot-dip zinc coated sheet (UNI EN 10327) with zinc facing on welding area, subject to IMQ and VDE controls. The reduced internal welding and absence of sharp edges allow cables to slide through smoothly without risk of their coating being damaged. The electrical continuity and air/water-tight seal of the system are guaranteed through the use of the connectors indicated in the chart to the right (all approvals are based on the closed system to certify conformity of the conduit/connector as a whole). They offer good protection against electro-magnetic interference on a wide frequency band.

Non-threadable conduits suitable for cold bending, including with limited radius (2,5-3 times conduit Ø).

Conduit lengths: 3000 mm (0 / +2 mm) and 4000mm (0 / -50 mm).

Ambient Temperature: +70/-15 °C

Classification

Manufactured in compliance with CEI EN61386-1, CEI EN 61386-21, CEI EN 60423 Standards.

Significant classification codes: 5 5 4 5

Resistance to compression:
Very Heavy (4000 N)

Resistance to impact: Very Heavy (20 J)

Tensile strength: Heavy (1000 N)

Suspended load capacity: Heavy (450 N)

Protection degree: IP66/67

Corrosion Resistance: 4 (High)

Electrical properties: Electrical continuity guarantee

Characteristics

Electro-coupled conduits made from sheets of AISI 304 (X5CrNi1810 1.4301 UNI EN 10088-1) uniformly brushed stainless steel, in order to obtain a good surface finishing.

The removed inner welding allows for perfect cable sliding without any coating damage risk.

Non-threadable conduits suitable for cold bending, including with limited

radius (2,5-3 times conduit Ø).

Conduit lengths: 4000 mm (0 / +2 mm)

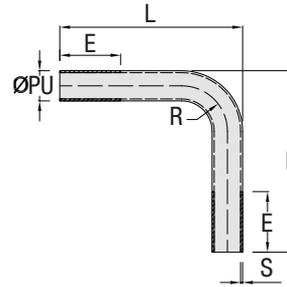

Conduits with different dimensions are available on customer request.

Ambient Temperature: +70/-15 °C

90° Non-threading elbows made from rigid metal conduit

Classification

Manufactured in compliance with CEI EN61386-1 and 61386-21 standards

Protection degree: IP67

Electrical properties: Electrical continuity guarantee

Characteristics

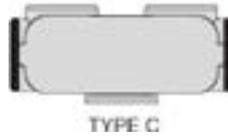

Elbows made from galvanized steel conduit and made from stainless steel conduit.

The bending radius is 2,5 times as big as the diameter and it allows to keep the conduits section uniform.

The mouth-pieces finishing is done with the greatest care, in order to ensure a perfect nest of cables without any damages to the coating. Usually they are used when particular needs of application do not allow the conduits bending itself.

Classification

Manufactured in compliance with CEI EN 61386-1

Significant classification codes: 5 5 4 5

Tensile strength: Heavy (1000 N)

Suspended load capacity: Heavy (450 N)

Protection degree: IP66/IP67

Corrosion Resistance: 2 (Medium)

Electrical properties: Electrical continuity guarantee

Characteristics

Made of brass which is then nickel plated in order to improve resistance in face of the hard environmental conditions in which they are going to be used. Certified products, they are under the IMQ and VDE Quality Mark controls.

The connector is coupled to the conduit by means of a patented device consisting of a system of steel balls. Electrical continuity is guaranteed in time because the ball bearings do not scratch the galvanization on the conduit, which prevents possible areas of oxidation.

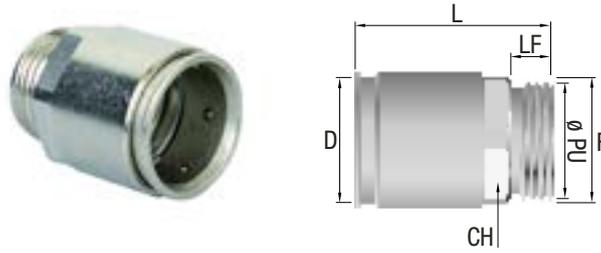

The system's IP67 seal is guaranteed by a toroidal seal inserted into the conduit; to ensure that this requisite is met, a number of elementary instructions must be followed:

- The conduit must be cut orthogonally and burrs removed to avoid damage to the seal and cable coating during insertion;
- Join the two pieces by pushing the conduit that is inserted and gently rotate to overcome seal resistance.

Suggested threads are: Iso Metric in compliance with CEI EN 60423 Standard (in accordance with CEI EN 61386 Standard) and cylindrical GAS UNI ISO 228.

Ambient Temperature: +70/-15 °C

Classification

Manufactured in compliance with CEI EN 61386

Significant classification codes: 5 5 4 5

Tensile strength: Heavy (1000 N)

Suspended load capacity: Heavy (450 N)

Protection degree: IP66/IP67

Corrosion Resistance: 4 (High)

Electrical properties: Electrical continuity guarantee

Characteristics

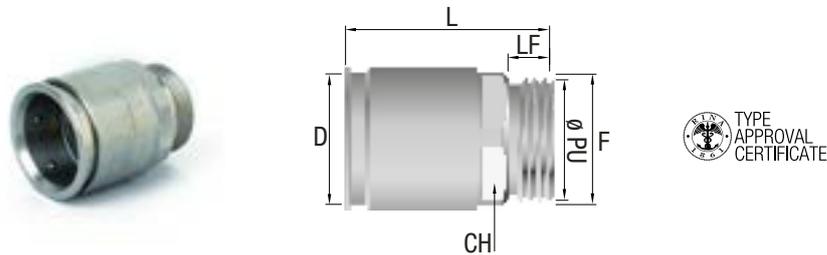

Made in AISI 316L EN 1.4404 stainless steel and designed for use in situations where traditional nickel-plated brass fitting are considered to be insufficiently resistant to the environmental conditions.

The operating characteristics are identical to nickel-plated brass fittings.

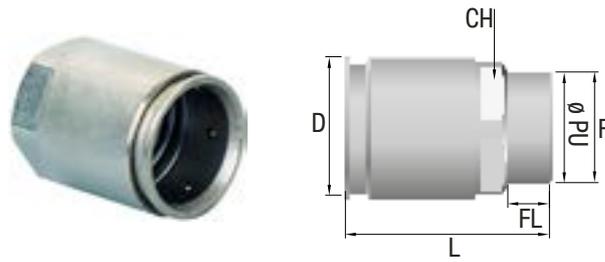

The thread is ISO Metric and complies with CEI EN 60423

Ambient Temperature: +70/-15 °C

Classification

Manufactured in compliance with CEI EN 50262

Protection degree: IP54

Characteristics

Made of brass which is then nickel plated in order to improve resistance to hard environmental conditions in which they are used.

Consisting of a body within which is located a neoprene washer that deforms as a result of the nut being tightened, and guarantees IP54 water tightness.

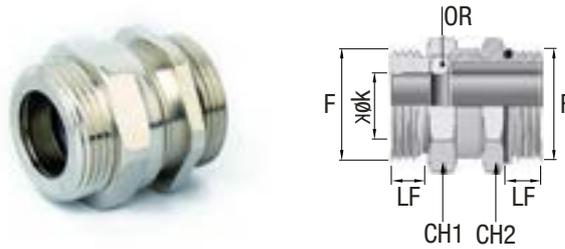

Suggested threads are: ISO Metric in compliance with CEI EN 60423, UNI ISO 228 GAS cylindrical and PG in accordance with DIN 40430.

Ambient Temperature: +70/-15 °C

Classification

Manufactured in compliance with CEI EN 50262

Protection degree: IP68

Characteristics

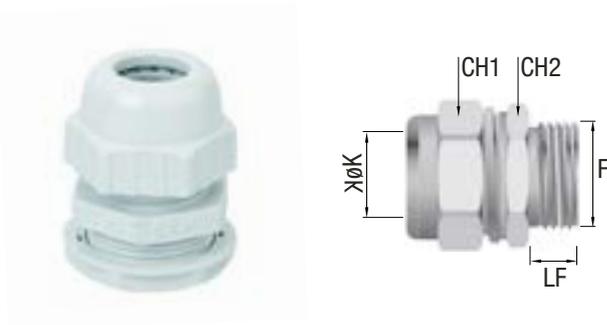

Made of brass which is then nickel plated in order to improve resistance to corrosion effect.

Special glands produced, with a metric male threaded head. Suitable for coupling to end connectors for rigid metal conduits or flexible conduits that have the same female thread.

They are designed for use when it becomes necessary giving the water tightness to the system.

Thread is ISO Metric in compliance with CEI EN 60423.

Classification

Self-extinguishing in accordance with UL94: V2

Resistance to heat: glow wire tested to 750°C in accordance with VDE 0471 DIN and associated international IEC standard 695

Protection degree: IP68

Characteristics

Made of brass which is then nickel plated in order to improve resistance to hard environmental conditions in which they are used.

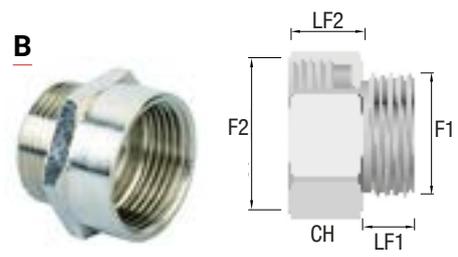

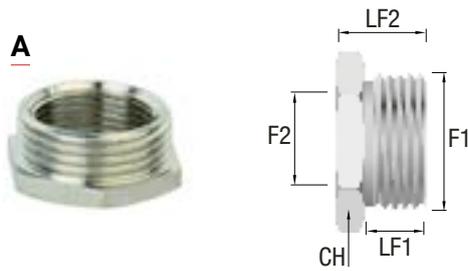

Consisting of a body within which is located a neoprene washer that deforms as a result of the nut being tightened, and guarantees IP54 water tightness.

Suggested threads are: ISO Metric in compliance with CEI EN 60423, UNI ISO 228 GAS cylindrical and PG in accordance with DIN 40430.

Ambient Temperature: +70/-15 °C

Characteristics

Areas of application

Made of brass which is then nickel plated in order to improve resistance to hard environmental conditions. Suggested thread are: ISO Metric in compliance with CEI EN 60423, UNI ISO 228 GAS cylindrical and PG in compliance with DIN 40430.

Suitable for use with all threaded connectors for flexible conduits or rigid conduits. They are designed for use when it becomes necessary to couple threaded mouthpieces that have different diameters or types of thread.

Made of brass which is then nickel plated in order to improve resistance to hard environmental conditions in which they are used.

Type A: are manufactured with a large circular resting surface.
 Type B: are produced from a hexagonal bar.
 Suggested threads are: Metric ISO in accordance with CEI EN 60423, UNI ISO 228 GAS cylindrical and PG in accordance with DIN 40430.

Made of soft copper, they offer excellent mechanical and heat resistance.
Used for coupling metal components, they are specially suitable for demanding applications.

Ambient Temperature: +70/-15 °C

Used with threaded connectors or glands, they guarantee the water-tightness of the installation.
 Are made of cellulose fibre with asbestos-free elastomeric binder, they offer good mechanical and heat resistance.
 Suitable for applications where there is contact with fuels, animal and vegetable oils, lubricants and gas.

Ambient Temperature: +70/-15 °C

Used with threaded connectors or glands, they guarantee the water-tightness of the installation.
 Are made of Perbunan (NBR), they offer high abrasion resistance and good mechanical resistance.
 Excellent performance in applications in contact with mineral oils, grease, petrol and mild acids.

Ambient Temperature: +70/-15 °C

Rigid medium protected conduit system is made in thermoplastic PVC material.

In compliance with IEC 61386-1 (CEI 23/80) e IEC 61386-21 (CEI 23/81).

The conduits are available in: 4 sizes from 16 to 32 mm for length 2 metres, 7 sizes from 16 to 63 mm for length 3 metres.

Suitable for electrical systems and/or data transmission.

Installation type: exposed on walls and ceilings or for applications inside false ceilings and floating floors.

Colour: Grey RAL 7035

Glow wire test:: 960 °C

Insulation resistance: 100 M a 500 V for 1 minute

Resistance to compression: 3 (Medium - 750 N)

Resistance to impact: 3 (Medium - 2 J)

Resistance to bending: 1 (Rigid)

Dielectric rigidity: 2000 V a 50 Hz for 15 minutes

Flexible conduit clamps

Clamps and slide are made of AISI 304 stainless steel, with rounded edges to prevent damage to the flexible conduit surface. The screw is hexagonal and made of galvanized steel with a screwdriver slot.

Flexible conduit clamps with grounding screws

Clamp and slide are made of galvanized steel, with rounded edges, galvanized steel hexagonal screw with a screwdriver slot. The grounding screw is electric welded to the clamp and it comes complete with a CH nut of 7 mm. Screw torque = 4 Nm

11.20.46.20.00005875	58 ÷ 75	50

Characteristics

Made of a PE-LD plastic material alogen-free and applied to the ends of metal conduits to prevent the cables from coming into direct contact with the edges of the conduit during feeding.

Ambient Temperature: +70/-15 °C

Galvanized steel conduit clip collars speedy fix system

Characteristics

Made from Fe60 steel and AISI 304 electro-galvanized. They are comprised of a shaped support with rip-proof safety clips that hold the conduit in place to offer high resistance to resistance to suspended weights.

The base units are available with a 6x10mm slot.

The screw-free system means they can be installed without the use of tools.

Screws and plugs must be ordered separately.
